Zhaoyan LIU
Part2

I use the default setting in for testing is 10-fold cross-validation.

Algorithm	Accuracy (correctly classified instances	Time to build model	Readability
NaiveBayes	635 92.9722 %	0.01 seconds	Even though the model provide a clear table, but each row has too many data numbers so is not a readable model.
Multilayer Perceptron	638 93.4114 %	29.01 seconds	The Classifier model is too long and too much, low readability
JRip	630 92.2401 %	0.22 seconds	The model is also not readable.
J48	625 91.5081 %	0.02 seconds	J48 is human readable classification model and every leaves and roots are clear to see.
